

Data management

The Importance of Effective Data Management

- Read/Write speed of HDD can range: **80 – 160 MB/s**
- A typical SSD R/W speed: **200 MB/s to 550 MB/s**

The Importance of Effective Data Management

- So, just storing of data is NOT a major issue today –
 - In 2008, \$600 disk drive could store all world's music!
- Effective management of data is a major issue that involves
 - organise,
 - store,
 - Retrieval & process,
 - & update.

**What method
to use?**

Let's do a simple Exercise

- Read the scenario below and then answer the question.
 - *A local video shop manually processes video loans and returns, and keeps their records in paper format. The owners of the shop are considering computerising their business operation and record keeping.*

How to store: Option 1

- The video shop can store as an **One-dimensional** text data
 1. *David Low has rented “Avatar” on 23/8/22 at 1pm.*
 2. *Patrick Vidgen has rented “Titanic” on 19/8/22 at 2pm.*
 3. *John Campbell has rented “Rebirth” on 1/8/22 at 4pm.*
 4. ...
 5. ...
 - ...
 101. *Patrick Vidgen returned “Titanic” on 17/9/22 at 10am.*

How to store: Option 2

- The video shop can also store as a **Two-dimensional** table

Customer First Name	Customer Last Name	DVD Title	Borrowing Date	Borrowing Time
David	Low	Avatar	23/8/22	1pm
Patrick	Vidgen	Titanic	19/8/22	2pm
John	Campbell	Rebirth	1/8/22	4pm

Which Option is More Rational and Why?

Customer First Name	Customer Last Name	DVD Title	Borrowing Date	Borrowing Time	Return date	Return time
David	Low	Avatar	23/8/12	1pm		
Patrick	Vidgen	Titanic	19/8/12	2pm	17/9/12	10am
John	Campbell	Rebirth	1/8/12	4pm		

- Answer: Option 2 is better
- Can be used **Spreadsheet** (MS Excel) to record & store

Data Redundancy, Inconsistency & Security

- **Redundancy:** duplication of data or storing the same information in multiple places.

- **Inconsistency:** one of the primary problems with redundant information. In spread sheet, update to data could use a search/replace; may not work if people are not consistent with data entry. **Example: Mohammad or Muhammad or Mohammed or Mohamed?** Which one is used? Typos may also happen!
- **Security** – an important consideration; who should have access to what information? Who should be able to make changes to data? **At the moment the security is limited to what is available within the spreadsheet software. May be able to put a password on the file, or lock certain fields from being able to be changes. However, there are limitations to what can be implemented.**

Data Redundancy, Inconsistency & Security

- **Anomalies** are introduced into the data when inserting new data, updating old data or deleting data.
 - **Insertion** anomaly – e.g., addition of a new agent to customer table requires dummy customer entry into the table.
 - **Deletion** anomaly – e.g., deletion of customer data requires deletion of agent data too.
 - **Update** anomaly – e.g., updating an agent's phone number requires update in more than one entries.

Update anomaly!

Deletion anomaly!

Insertion anomaly!

- **Solution:**

- What is the solution?
- Ans: use a separate Agent file and Customer file only have agent IDs to refer to Agent table!
